Allowable Subject Matter

1. Claims 1-15 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claim 1 recites, inter alia, a pair of capacitors coupled in a current path of said first supply inductance current for developing an output supply between a pair of output supply terminals that are coupled to a load, said pair of capacitors providing capacitive isolation of said output supply terminals from said input supply terminals, respectively, at frequencies lower than said first frequency and form with said first supply inductance a first resonant circuit that varies said first supply inductance current in a resonant manner operation, during a first portion of a period of said first supply inductance current; and a first rectifier coupled in said current path for preventing the first supply inductance current variation from resulting in a polarity change of said first supply inductance current, during said first period portion.

Claim 10 recites, inter alia, a pair of capacitors coupled in series with said first supply inductance, during a first portion of a period of said control signal, and having said second supply inductance coupled between said capacitors for developing from a voltage produced in said second supply inductance an output supply between a pair of output supply terminals of a load, said pair of capacitors providing capacitive isolation of said output supply terminals from said input supply terminals at frequencies lower than said first frequency', and a first rectifier coupled in series with said first supply inductance for preventing said first supply inductance current from changing polarity.

The art of record does not disclose the above limitations, nor would it be obvious to modify the art of record so as to include either of the above limitations.
